IT2021: AIML Project

2nd Year, Semester 2, 2026

Assignment Title	Assignment 05 – Final Report
Learning outcomes covered	LO2, LO3, LO4, LO5.
Assignment Mode	Report (Document)
Maximum Marks	10
Contribution to the Final Grade	10%
Date published	Week 10
Deadline for submissions	Week 14
Mode of Submission	Courseweb file submission as a PDF.

Assignment Description

This assignment evaluates students' ability to document and present the work. The report should clearly reflect the development process, technical understanding, and achievement of project objectives.

The report must be structured into three sections:

1. Main section (most significant component)
2. Pre-Body Section
3. Post-Body Section

The Main Body (20–30 pages) is the most important part of the report and will carry the majority of the marks. Students are expected to provide sufficient depth of explanation, supported by appropriate diagrams and evidence.

1. Main Section

The content must be organized according to the chapters listed below. Students may add relevant sub-sections where necessary. All explanations must be clear, structured, and supported with appropriate diagrams.

Chapter 1: Introduction

- Problem and motivation
- Literature review
- Aim and objectives
- Solution overview (must include a **clickable link to the Git repository**)

The introduction should clearly establish the context of the project and demonstrate understanding of the problem domain.

Chapter 2: Requirement Analysis

- Stakeholder analysis
- Feasibility and SWOT analysis
- Requirements modelling

This chapter should clearly explain how system requirements were identified, analyzed, and structured.

Chapter 3: Design and Development

This chapter must present the system's design and development approach in a structured and well-explained manner. Including diagrams without explanation will not be sufficient.

- System/component architecture diagrams
- Process or workflow diagrams
- Database design diagrams (e.g., ER diagrams)
- Development-related diagrams or models

Chapter 4: Results and Evaluation

- Clearly state the system outcomes.
- Explain what the system does and how well it performs.
    - Include supporting evidence such as Test results, Performance metrics, User feedback, Expert evaluations

Chapter 5: Conclusion

- Summarize how the objectives have been met.
- Explain how the overall project aim has been achieved.
- Provide a concise summary of key achievements.

References

- Include all references cited in the main text.
- A consistent academic referencing style such as IEEE referencing style must be used throughout.
- Students are strongly encouraged to use a referencing tool to manage citations and generate the reference list.

2. Pre-Body Section

The pre-body section must appear before the main body in the final submission and include the following components in the order listed:

1. Title Page (Include the title, the ITP group number, campus, names and ID numbers and date of submission)
2. Declaration (Include names, IDs and signatures of members)
3. Abstract (Maximum one page)
4. Acknowledgement (Maximum one page)
5. Table of Contents (Automatically generated using a word processing tool)
6. List of Tables (Automatically generated)
7. List of Figures (Automatically generated)
8. List of Abbreviations (Listed alphabetically)

3. Post-Body Section

Appendix A (1–2 pages)

A table clearly indicating the contribution made by each team member.

- Ensure that each member agrees on the contribution percentages.
- Contributions should reflect actual effort and value added, not just time spent.
- Link contributions to work evidence, e.g., **Git commits**, diagrams produced, and testing performed.

Appendix B (If applicable)

Additional supporting material that is not essential to the main discussion. Core content should remain within the main chapters. Include screenshots of main user interfaces or extended material.

All appendices must be clearly labelled and referred to within the main body of the report.

Formatting guidelines:

i. General formatting Page size: A4

ii. Margins: default margins

iii. Normal font: Times New Roman

iv. Normal font size: 11

v. Line spacing: Multiple at 1.2

vi. Paragraph alignment: Justify

vii. Page numbering:

- Main section: Include page numbering from the first page of the first chapter (introduction). The page numbering should start from 1 (Arabic 1).
- Pre- body section: Roman numerals (i, ii, iii, iv, ...)

viii. All the figures and tables should use proper captions. Use specific names rather than generic names. For example, use “Sequence diagram of login process” instead of “Sequence diagram”.

ix. Figures and tables should be numbered based on chapter number, starting from 1 in each chapter. For example, the number of the first figure in chapter 3 should be “Figure 3.1:”.

x. The text size in the figures is close to the paragraph text size, thus, they are readable.

xi. Headings (Use the styles in MS Word) Section/Chapter heading (Heading 1): 16, Bold, Center, Lower border

xii. Sub-section level 1 headings (Heading 2): 12, Bold, Underlined, left aligned

xiii. Sub-section level 2 headings (Heading 3): 11, Bold, Underlined, left aligned

Marking Scheme

Criteria	Excellent	Very Good	Good	Satisfactory	Poor
Chapter 1: Introduction and problem definition **20%**	All sections are complete, clear, coherent, and demonstrate strong understanding; problem, motivation, and objectives are fully defined; the solution overview clearly explains the system and the role of the AI/ML feature; Git repo provides good evidence	Mostly complete and coherent; minor gaps in clarity or missing minor details; the solution overview explains the system and identifies the AI/ML feature with adequate clarity; Git repo link provides good evidence	Adequate coverage of sections; some gaps or lack of clarity; the solution overview describes the system but gives only a limited explanation of the AI/ML feature; Git repo link provides sufficient work	Basic coverage; lacks depth or clarity; the solution overview gives only a brief or unclear mention of the AI/ML feature; Git repo link functional	Poor or missing sections; background, problem, or objectives unclear; the solution overview does not meaningfully describe the AI/ML feature or is missing; no Git repo link or non-functional
Chapter 2: Requirements **20%**	Comprehensive analysis, and modeling; clearly presented and justified; stakeholder and SWOT analysis complete	Mostly complete requirements, SWOT analysis with minor gaps; clear presentation	Adequate coverage of requirements; minor errors or inconsistencies	Minimal requirements analysis; limited justification or modeling	Missing or poorly developed requirements analysis
Chapter 3: Design & Development **25%**	Well-structured, detailed explanation of design and development; the design and workflow of the AI/ML feature are clearly presented and well explained; all diagrams accurate, clearly labeled, and fully explained; strong alignment with requirements	Good design; diagrams mostly accurate and explained; the AI/ML feature design is presented and explained clearly; minor gaps	Adequate diagrams and explanations; the AI/ML feature design is presented but explanation lacks clarity or detail; some clarity issues	Basic design coverage; the AI/ML feature design is minimally described or unclear; diagrams missing or incomplete	Poor or missing design; the AI/ML feature design is not presented or is incorrect; diagrams absent or incorrect

Chapter 4: Results & Evaluation **20%**	Product evaluated thoroughly with clearly supported evidence including clear evaluation of the AI/ML feature using appropriate metrics or validation methods	Product evaluated well, with reasoning; evaluation of the AI/ML feature is present with reasonable supporting evidence	Some parts of the product is evaluated; evaluation of the AI/ML feature is limited or lacks sufficient evidence	Attempted to evaluate some parts of the product; evaluation of the AI/ML feature is minimal or unclear	Evaluation missing or unsupported by results/feedback, including no meaningful evaluation of the AI/ML feature
Chapter 5: Conclusion **5%**	Objectives and aim clearly summarized; evidence that all objectives met and aim achieved	Mostly clear conclusion: minor gaps in linking objectives to results	Adequate conclusion: some objectives or aim partially addressed	Basic conclusion: weak linkage to objectives or aim	Poor or missing conclusion; objectives/aim not addressed
References **5%**	References comprehensive, accurate, formatted correctly; used a referencing tool	Good references; minor formatting issues	Adequate references; some missing details or inconsistencies	Limited references; major formatting errors	References missing or poorly formatted
Professionalism & Collaboration **5%**	Report demonstrates professionalism in presentation, writing, and collaboration; clear evidence of equitable teamwork and practices	Mostly professional report; good collaboration; minor gaps in inclusivity or clarity	Adequate professionalism and teamwork; some inclusivity issues or inconsistencies	Limited professionalism or collaboration; minimal evidence of teamwork	Unprofessional report; no evidence of teamwork or inclusive practices
